1 The Advisor has contractually agreed to waive its management fee and/or reimburse expenses in the amounts shown at least through the respective fee waiver expiration dates as shown below and for an indefinite period thereafter, subject to annual reapproval of the agreement by the Board of Trustees:

June 8, 2019 – Dorsey Wright Micro-Cap ETF (DWMC) and Dorsey Wright Short Equity ETF (DWSH)

November 1, 2019 – Dorsey Wright ADR ETF (AADR); Vice ETF (ACT); Focused Equity ETF (CWS); Pacific Asset Enhanced Floating Rate ETF (FLRT); New Tech and Media ETF (FNG); FolioBeyond Smart Core Bond ETF (FWDB); Sage Core Reserves ETF (HOLD); Cornerstone Small Cap ETF (SCAP); and STAR Global Buy-Write ETF (VEGA)

December 26, 2019 – Sabretooth ETF (BKCH)

2 On October 11, 2018, the AdvisorShares Wilshire Buyback ETF (the “Predecessor Fund”) was renamed the AdvisorShares DoubleLine Value Equity ETF. The Predecessor Fund had different portfolio managers and investment strategy than the DoubleLine Value Equity ETF. Performance prior to October 12, 2018 reflects the Fund’s performance prior to the change in manager and investment strategy and may not be indicative of the Fund’s performance under the new manager and revised investment strategy. Performance since October 12, 2018 reflects actual DoubleLine Value Equity ETF performance.

3 Simultaneous with the commencement of the Fund’s investment operations on July 7, 2016, a separate account (the “Predecessor Account”), which was managed by the same portfolio management team, converted into the Fund. The Predecessor Account began trading June 30, 2012. All performance prior to July 7, 2016 represents actual trading of the Predecessor Account and has not been restated to reflect the estimated total annual operating expenses of the Fund, which, if reflected, would lower returns. Performance after July 7, 2016 is reflective of the total annual operating expenses of the Fund.

4 On April 1, 2019, the AdvisorShares Madrona Global Bond ETF (the “Predecessor Fund”) was renamed the AdvisorShares FolioBeyond Smart Core Bond ETF. The Predecessor Fund had different portfolio managers and investment strategy than the FolioBeyond Smart Core Bond ETF. Performance prior to April 1, 2019 reflects the Fund’s performance prior to the change in manager and investment strategy and may not be indicative of the Fund’s performance under the new manager and revised investment strategy. Performance since April 1, 2019 reflects actual FolioBeyond Smart Core Bond ETF performance.

Performance data quoted represents past performance and is not a guarantee of future results. Current performance may be lower or higher than the performance data quoted. Investment return and principal value will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than original cost. Returns less than one year are not annualized. For most recent month-end performance, visit www.advisorshares.com.

For more information, call AdvisorShares at 1.877.843.3831 or email info@advisorshares.com.

The **Bloomberg Barclays 1-3 Month U.S. Treasury Bill Index** includes all publicly issued zero-coupon U.S. Treasury Bills that have a remaining maturity of less than 3 months and more than 1 month, are rated investment grade, and have \$250 million or more of outstanding face value.

The **Bloomberg Barclays Capital Aggregate Bond Index** measures the performance of the U.S. investment grade bond market.

The **BNY Mellon Classic ADR Index** combines the over the counter (OTC) traded ADRs with exchange-listed ADRs bringing transparency to the available universe of American Depositary Receipts, including those issued by many of the world's premier companies.

The **ICE BofA Merrill Lynch 1-5 Year US Corporate & Government Bond Index** which tracks the performance of US dollar denominated investment grade debt publicly issued in the US domestic market, including US Treasury, US agency, foreign government, supranational and corporate securities, with a remaining term to final maturity less than 5 years, calculated on a total return basis.

The **MSCI EAFE Index** is an unmanaged free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the US & Canada.

The **MSCI All Country World Index** is an unmanaged free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets.

The **Russell 2000 Index** is an index measuring the performance approximately 2,000 small-cap companies in the Russell 3000 Index, which is made up of 3,000 of the biggest U.S. stocks.

The **Russell Microcap Index** measures the performance of the microcap segment of the U.S. equity market. It makes up less than 3% of the U.S. equity market. It includes 1,000 of the smallest securities in the Russell 2000 Index based on a combination of their market cap and current index membership and it also includes up to the next 1,000 stocks.

The **Russell 1000 Value Index** measures the performance of the large-cap value segment of the U.S. equity market. It includes those Russell 1000 companies with lower price-to-book ratios and lower expected and historical growth rates.

The **S&P / LSTA Leveraged Loan 100 Index** is designed to reflect the largest facilities in the leveraged loan market and mirrors the market-weighted performance of the largest institutional leveraged loans. S&P/LSTA U.S. Leveraged Loan Index is designed to reflect the U.S. senior loan market.

The **S&P 500 Index** is a broad-based, unmanaged measurement of changes in stock market conditions based on the average of 500 widely held common stocks.

One cannot invest directly into an index.

A **long position** is the purchase of an investment with the expectation that it will rise in value.

A **short position** is the sale of a borrowed investment with the expectation that it will decline in value.

Duration measures (in years) the sensitivity of the price of a fixed-income investment to a 1% change in interest rates.

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. Beta is used in the capital asset pricing model (CAPM), a model that calculates the expected return of asset based on its beta and expected market returns.

R-Squared is a statistical measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

Standard Deviation is a measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Standard deviation is calculated as the square root of variance.

Annualized Return is the return an investment provides over a period of time, expressed as a time-weighted annual percentage. Sources of returns can include dividends, returns of capital and capital appreciation. The rate of annual return is measured against the initial amount of the investment and represents a geometric mean rather than a simple arithmetic mean.

Cumulative Return is the aggregate amount that an investment has gained or lost over time, independent of the period of time involved. Presented as a percentage, the cumulative return is the raw mathematical return.

Alpha is a measure of performance on a risk-adjusted basis. Alpha takes the volatility (price risk) of a fund and compares its risk-adjusted performance to a benchmark index. The excess return of the fund relative to the return of the benchmark index is a fund's alpha.

The **Sharpe Ratio** was developed by Nobel laureate William F. Sharpe to measure risk-adjusted performance. The Sharpe ratio is calculated by subtracting the risk-free rate - such as that of the 10-year U.S. Treasury bond - standard deviation of the portfolio returns.

Up-Market Capture Ratio is a statistical measure of an investment manager's overall performance in up-markets. The up-market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen. The ratio is calculated by dividing the manager's returns by the returns of the index during the up-market, and multiplying that factor by 100.

Down-market Capture Ratio is a statistical measure of an investment manager's overall performance in down-markets. The down-market capture ratio is used to evaluate how well or poorly an investment manager performed relative to an index during periods when that index has dropped. The ratio is calculated by dividing the manager's returns by the returns of the index during the down-market and multiplying that factor by 100.

Maximum Drawdown is a peak-to-trough decline during a specific record period of an investment, fund or commodity. A drawdown is usually quoted as the percentage between the peak and the trough.

An investment in the Fund(s) may be subject to domestic equity, international equity, fixed income, derivatives/options, leverage, short selling, underlying funds, and/or cannabis risk, including the possible loss of the principal invested. These funds may not be suitable for all investors.

Shares are bought and sold at market price (closing price) not NAV and are not individually redeemed from the Fund. Market price returns are based on the midpoint of the bid/ask spread at 4:00pm Eastern Time (when NAV is normally determined), and do not represent the return you would receive if you traded at other times. Holdings and allocations are subject to risks and to change.

Before investing you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other information is in the prospectus, a copy of which may be obtained by visiting the Fund's website at www.AdvisorShares.com. Please read the prospectus carefully before you invest.
